Anal Canal and Perianal Skin

(ICD-O-3 C21, ICD-O-3 C44.5)

The anal canal extends from rectum to perianal skin (to the junction with hair-bearing skin). It is lined by the mucous membrane overlying the internal sphincter, including the transitional epithelium and dentate line. Tumours of anal margin and perianal skin defined as within 5 cm of the anal margin (ICD-O C44.5) are now classified with carcinomas of the anal canal.
