SASL Day of the Liver Journée du foie de la SASL

by Virginie Rykart

Jequier Doge Auditorium, CHUV
Lausanne - May 6, 2021

WELCOME

Dear colleague, dear Madam, dear Sir,

On behalf of the Swiss Association for the Study of the Liver (SASL), we are pleased to invite you to the SASL Day of the Liver 2021.

New insights into hot topics in hepatology have been gained recently. We are privileged to welcome an outstanding cast of national and international experts who shall provide state-of-the-art updates on some of these topics, including the management of hepatitis D, autoimmune hepatitis and bacterial infections in patients with cirrhosis as well as the role of liver pathology in the diagnosis and management of liver disease, the clinical approach to hyperferritinemia as well as nonalcoholic fatty liver disease and hepatocellular carcinoma. We shall conclude the afternoon with flash updates on advances in the management of hepatocellular carcinoma by our expert colleagues from visceral surgery, interventional radiology and medical oncology. Hence, the SASL Day of the Liver 2021 shall cover topics relevant to primary care as well as specialized management of liver disease.

We look forward to welcoming you on the CHUV campus or online to an afternoon of informative and lively exchange.
